points

4.

With some code chunks, we may not want the output generated by the chunk to be rendered into HTML but would prefer to print the output verbatim. How can we specify this preference for a given code chunk?

- ☐ Set the option `highlight = TRUE`
- ☒ Set the option `results = "asis"`

Correct

- ☐ Set the option `tidy = FALSE`
 - ☐ Set the option `message = FALSE`
-

points

5.

When using knitr and R Markdown and producing output in HTML, why should you never edit the resulting HTML file?

Every time you knit() the R Markdown file, the HTML file will be overwritten

Correct

Editing the HTML file requires knowledge of a separate markup language.

The Markdown file generated by knitr is the appropriate file to edit.

The HTML file is not a text file.
